Roll forming Machine
RPP

The roll forming machine with recover (RPP), as provided with wheels, can be integrated with the production line and it's managed from a software.

Its function is to deposit and press the laminated or extruded dough inside a tray, removing the surplus.

The machine is provided with: an embossed device, a forming roller, a conveyor belt for the off-cuts and a hopper.

Both embossed device and forming roll may change according to the shape of trays.

The machine can be disassembled and cleaned easily without tools.

Technical features:

Conveyor belt available width: 600 mm

Height: 1650 mm

Width: 1600 mm

Length: 1200 mm

Applications:

The shortcrust pastry is placed on the baking tray and it's pressed automatically to realize the jam tarts.

The images shown here are for illustrative purpose only. Both machine's features and finished product may change according to customisations requested by the Client.
